ZEN AND THE ART OF TUNING

The Pigtronix 2NR is a no-nonsense, high-precision chromatic tuner pedal for guitar and bass. It features a large, high-contrast LED screen and ultra-fast pitch detection software that makes tuning quick and easy for musicians of every skill level.

2NR intentionally contains no extraneous features. There are no alternate modes or opportunities for accidental frustration. The pedal exists solely to help musicians tune their instrument to 440 Hz standard concert pitch as quickly and accurately as possible.

When 2NR is activated, the output is muted. When the pedal is not in use, relay-based, true bypass switching ensures that 100% of your tone passes through the pedal without any loss of fidelity. Housed in a robust aluminum chassis, 2NR is built for a lifetime of onstage performance. Pigtronix 2NR runs on standard 9VDC power.

EXPLANATION OF CONTROLS

1 Footswitch: Pressing the Foot Switch will turn the tuner on/off. When the tuner is off, the Output Jack will output the signal of the instrument connected to the Input Jack. When the tuner is on, no sound will be output from the Output Jack so you can tune silently.

2 Input Jack: Connect the cable from your instrument to the Input Jack of the tuner.

3 DC 9V In Jack: The DC 9V Jack requires a power plug with dimensions of 5.5 x 2.1 (mm) and center-negative polarity. The current draw at the DC 9V jack is under 100mA.

4 Output Jack: Connect the cable from your amp to the Output Jack of the tuner.

TUNING PROCEDURE

- 1) Connect output of the instrument to the Input Jack of the tuner.
- 2) Press the Foot Switch to turn the tuner on.
- 3) Adjust the instrument until the tuning note you wished to tune is indicated.
- 4) Adjust the instrument slowly until the tuning guide reaches the center position.
- 5) When the green center wedge of the tuning guide lights up, the instrument is in tune.
